FOREWORD

The Army Force Planning Cost Handbook (AFPCH) is organized into six sections for ease in locating the types of data contained therein and for its orderly presentation.

- | | |
|-------------|---|
| Section I | is an introduction to the AFPCH, its contents and usage. |
| Section II | contains per capita cost factors. |
| Section III | contains detailed costs for major combat and combat support units, together with the force costing methodology. |
| Section IV | contains costs of "notional type" division force equivalents, including support elements. |
| Section V | contains factors and methodology for estimating the cost of reserve units. |
| Section VI | contains operating and support cost factors, as referenced in Appendix C, DA Pamphlet No. 11-4, for developing life cycle cost of materiel systems. |

DTIC
SELECTED
APR 12 1983
H

Since this edition contains many types of cost factors and cost data based on varied methodological assumptions, NO DATA FOUND HEREIN SHOULD BE USED UNTIL ALL THE EXPOSITORY INFORMATION, ASSUMPTIONS AND LIMITATIONS HAVE BEEN READ AND UNDERSTOOD.

If this handbook is to fulfill the needs of the Army Staff for presenting cost data and factors for planning, it is important that suggestions for improvement be forwarded to:

HQDA (DACA-CAC)
THE PENTAGON
WASHINGTON, DC 20310

Specific questions concerning any of the expository materiel will be answered by calling AUTOVON 225-6697.

This document supersedes the AFPCH dated May 1981.

SECTION I

INTRODUCTION

1. INTRODUCTION AND PURPOSE.

a. The Army Force Planning Cost Handbook (AFPCH) is a product of the Force Cost Information System (FCIS), an automated system designed and maintained by the Office of the Comptroller of the Army (OCA) and the US Army Management Systems Support Agency (USAMSSA). It contains US Army planning factors which can be used in estimating resource requirements and costs associated with the Army force units, (Table of Organization and Equipment (TOE), Modification Table of Organization and Equipment (MTOE), by Standard Requirement Code (SRC) and Unit Identification Code (UIC)), force structures, missions and activities. Where appropriate, these generalized factors can be identified to the conventional budget structure and the Five Year Defense Program (FYDP).

b. The AFPCH is designed to be used as an aid in analyzing variations in resource requirements (Operations and Maintenance, Army (OMA), Military Personnel, Army (MPA) and Procurement) resulting from proposed force changes to approved active Army forces in a peacetime environment. Typical changes that may be addressed are:

- Force structure
- Force deployment
- Activity rates (e.g., aircraft annual flying hours)
- Training requirements
- Equipment modernization
- Manpower

c. Factors contained in the handbook represent overall Army experience (or projected operation) in a general peacetime environment, except as noted. It should be understood that they may not be applicable to specific local or command situations. They should be considered average guides which will produce a general estimate when combined with appropriate programing and other operational or activity data.

d. Factors are available for various types of force changes such as buildup from Army reserve components or all volunteer forces, and reductions such as decrease in draftees/enlistees and for estimating the cost of reserve forces. They provide Army Managers with a financial analysis tool for costing changes in the force structure, primarily on an incremental basis, and provide reasonable cost estimates for use in force structure studies, requirements studies and other special planning studies. The handbook is designed to facilitate demands for fast cost estimating requirements and is intended to be used to estimate first approximations of costs.

e. The data are intended to represent the variable effect on costs within the Procurement, MPA, and OMA appropriations structure of changes in numbers, types and geographic location of units, and equipment within units in the existing force. Variable costs are presented herein as these costs vary directly with an increase or decrease in the force structure. Fixed cost factors remain relatively static during minor changes in the Army force structure and are not included in this handbook.

f. All equipment costs are now presented in FY82 budget dollars. The FY84-88 Program Objective Memorandum (POM) Procurement Data Base was used as the source of unit prices for those items contained in the POM. Costs of all other items were derived from Supply Bulletin (SB) 700-20 and have been adjusted to FY82 dollars. Some of the prices derived from SB 700-20 will naturally differ from prices contained in the POM Procurement Data Base. MPA costs reflect the October 1981 pay raise.

g. The handbook is divided into six sections to make the type of cost data required more readily accessible to the user. There is an introduction in the front of each section which provides a detailed explanation of the contents of that section. All users are cautioned to carefully read the assumptions, limitations, and explanations contained in these sections to insure that data and factors are correctly used.

2. PROGRAM, PLANNING AND BUDGETING SYSTEM (PPBS).

The AFPCH contributes to all phases of the PPBS and to certain actions that cannot be categorized as supporting any particular phase. In the planning phase of the PPBS, it contributes to Joint Strategic Planning Document (JSPD) costing of the objective force, while in the programing phase it aids in reviewing POM force structure, requirement and resource allocation, which cannot be tied to specific events predicated by chronological schedules. The AFPCH is readily used where force structure and manpower authorizations require continuous review for accuracy in portraying PPBS decisions on the part of the Army, OSD and Congress.

3. PLAN FOR SUBSEQUENT UPDATES

a. Due to the extensive amount of work involved in updating the Force Cost Information System, as well as the cost of publishing and distributing the handbook, the AFPCH will normally be updated and published on a yearly basis to coincide with the POM review date. If major changes in cost factors, division force equivalent composition, et cetera, should occur in mid-year, a change to the AFPCH will be prepared as soon as possible. Otherwise, the next revision to the AFPCH will be June 1983.

b. Currently, depot maintenance costs for equipment are based on depot maintenance costs for the past two years only. Therefore, the depot maintenance cost for some equipment may be reflected as "0" if no depot maintenance was performed during that period of time. In future editions of the AFPCH it is planned to use average depot maintenance costs derived over a time period of several years which will more nearly reflect the true average cost per year. In the interim, AFPCH users who are concerned with the cost of a particular materiel system should revise the 7M costs based upon more realistic data that may be available to them.

SECTION II
PER CAPITA FACTORS

1. INTRODUCTION

a. This section contains a display of cost factors to be used for those costs exercises where time or other circumstances preclude more refined computations.

b. This section is designed to be used as an aid in analyzing and evaluating variations in resource requirements (OMA and MPA) resulting from proposed force changes to the active Army force structure. The cost factors contained herein are intended to be used for first approximation of cost due to changes in the force structure. Variable costs are presented herein as these costs vary directly with an increase or decrease in the force structure. Fixed costs remain relatively static during minor changes in the Army force structure and are not included in this section.

2. GENERAL

a. The cost factors are per-capita oriented and include both one-time and recurring costs. Recurring costs are the major element of expense in the majority of cost exercises. Generally, the basis for computing recurring costs is manyyears (MYs) and the basis for one-time costs is end strength. The following examples are shown to indicate acceptable methods for computing manyyears:

- (1) 48,000 men from Korea on 30 June 19XX*

1/4 of a fiscal year x 48,000 = 12,000 MYs out of Korea in FY 19XX.

- (2) Increase end strength (ES) by increasing accessions (draft) by 24,000 men beginning 30 June 19XX (assume 8,000 each in July, August, and September)

8,000 for 2.5 months or 2.5/12 of a year = 1,667 MYs

8,000 for 1.5 months or 1.5/12 of a year = 1,000 MYs

8,000 for 0.5 months or 0.5/12 of a year = 333 MYs

3,000 MYs

*Examples based on a fiscal year ending on 30 September.

b. In succeeding fiscal years, MYs and ESs are the same for planning purposes.

c. This method of computing MYs should be used only when time precludes the development of detailed data by appropriate Army staff agencies. Furthermore, this method should not be substituted for a detailed analysis and costing of the actual change in the force structure.

3. COST FACTORS

a. Military Personnel, Army (MPA) Appropriation

(1) MPA factors include the 1 October 1981 pay raises and are based upon the FY 1982 column of the FY 1983 President's Budget submission.

(2) MPA factors provide for pay and allowances, subsistence of enlisted personnel, the Government contribution to FICA, and permanent change of station travel of Army military personnel on active duty.

(3) Cost factors and computations assume that transients, trainees, holdees, and students (individuals) are included in the ES and MY figures.

(4) Officer and enlisted personnel cost factors are included for use when detailed data on officers and enlisted personnel are available. However, when no such detailed data for officer and enlisted personnel are available, composite cost factors may be developed using the officer/enlisted ratios developed from the FY82 column of the FY 1983 President's Budget submission. This ratio is 13% for officer and 87% for enlisted personnel. Caution should be used when estimating costs for several years using composite cost factors because of the possible change in the mix of the force structure. These ratios should be used only when time precludes the development of detailed officer and enlisted data. These ratios and cost factors should not be substituted for a detailed analysis and costing of the actual change in the force structure.

(a) Pay and Allowances by Grade

The following "by grade" rates are derived from the FY82 column of the FY 1983 President's Budget and include basic pay, basic allowance for quarters (BAQ), basic allowance for subsistence (BAS), and the Government's contribution to FICA. The rates exclude incentive and special pays, variable housing allowance, and permanent change of station (PCS) costs.

(SOURCE: DCSPER)

PAY AND ALLOWANCES

<u>Commissioned Officer</u>		<u>Warrant Officer</u>		<u>Enlisted</u>	
<u>Grade</u>	<u>Pay</u>	<u>Grade</u>	<u>Pay</u>	<u>Grade</u>	<u>Pay</u>

				E-1 - E-9	684
				E-1 - E-3	602

a/ The variable housing allowance is authorized under the provisions of Public Law 96-343, dated 8 September 1980. Under this law a member entitled to a basic allowance for quarters is entitled to a variable housing allowance whenever assigned to duty in an area of the United States which has been designated as a high cost area. The payment is also made to those members serving unaccompanied tours of duty outside the United States when the member's dependents reside in an area where the allowance is authorized. The variable housing allowances were developed by multiplying the FY82 projected average number of persons eligible, by grade, by the statutory rate applicable. The variable housing allowance for a specific location can be found in Vol 1, JTR, Appendix M.

INCENTIVE AND SPECIAL PAY

Flight Pay - Crew Member Average Annual Rates

<u>Commissioned Officer</u>		<u>Warrant Officer</u>		<u>Enlisted</u>	
<u>Category</u>	<u>b/ Pay</u>	<u>Category</u>	<u>b/ Pay</u>	<u>Grade</u>	<u>Pay</u>
125	\$1,500	125	\$1,500	E-9	\$1,572
156	1,872	156	1,872	E-8	1,572
188	2,256	188	2,256	E-7	1,572
206	2,472	206	2,472	E-6	1,404
250	3,000	400	4,800	E-5	1,188
280	3,360			E-4	1,020
310	3,720			E-3	996
340	4,080			E-2	996
370	4,440			E-1	996
400	4,800				

Avg Officer 3,931 Avg WO 3,662 Avg EM 1,172

b/ These categories are defined as follows:

<u>COMMISSIONED</u>			<u>WARRANT</u>		
<u>Category</u>	<u>Years of Off Serv</u>	<u>Years of Avia Serv</u>	<u>Category</u>	<u>Years of Off Serv</u>	<u>Years of Avia Serv</u>
125		2 or less	125		2 or less
156		over 2	156		over 2
188		over 3	188		over 3
206		over 4	206		over 4
250	over 25		400		over 4
280	over 24				
310	over 22				
340	over 20				
370	over 18				
400	over 6				

The amount of flight pay is determined by either the years of officer service or the years of aviation service. The category numbers (e.g. 125) correspond to the monthly flight pay. Category 206 means a commissioned officer with either "over 24" years of officer service or with "over 4" years of aviation service would be paid \$206 per month.

Parachute (Jump) Pay

	<u>Annual Rate</u>
Officer	\$1,320
Enlisted	996

Medical Pay

	<u>Annual Rate</u>
Physician	\$6,590
Dentist	7,373
Veterinary	1,200
Optometrist	1,200
Ave Medical Pay	6,462

The following factors, based on average total Army strength, can be used when the exact number of personnel receiving special pay is not known:

Per Capita Annual Special Pay

<u>Incentive Pay</u>	<u>Commissioned Officer</u>	<u>Warrant Officer</u>	<u>Enlisted</u>
Flight pay, crew	\$333	\$1,398	\$ 7
Flight pay, non-crew	3	3	3
Parachute jump pay	37	37	36

(b) Changes to Army End Strength and Manyears

(1) One-time MPA Costs. These one-time cost factors are applicable to the first year that an increase or decrease in ES or deployed strength occurs. A strength decrease, based on a reduction in accessions, requires special care in the application of any of these factors to estimate one-time cost avoidances. Such use of the factor presupposes that the reduction in accessions in the given fiscal year exceeds both the normal replacement stream of accessions and the changes in this stream as programmed in the budget for the force in question. The one-time factor would be applicable to the net number of programmed accessions avoided (those not in duplication with the normal replacement stream accessions avoided). This net number is the total number of accessions to be avoided in the year less the number of accessions reflected in the program for the year. (SOURCE: DCSPER)

- New Accession of 1st Enlistment, ROTC and OCS

Initial Clothing and Accession Travel

<u>From Home to Training to CONUS Duty Station</u>	<u>From Home to Training to Overseas Duty Station</u>
Officer: \$2,119 per accession	Officer: \$3,447 per accession
Enlisted: 989 per accession	Enlisted: 1,694 per accession

- Call-up Reserve Units: Includes a clothing allowance and PCS travel for officers and enlisted men (includes movement of dependents).

Officer: \$2,684 x Number Called-up = Costs
Enlisted: \$1,402 x Number Called-up = Costs

- PCS Rates. Includes dislocation allowance, travel costs of member and dependents, shipment of household goods, trailer allowance, and non-temporary storage of household goods. These are average factors. More exact factors for a given scenario can be obtained from DCSPER.

<u>Rotation for Reassignment/Separation</u>	<u>Officer</u>	<u>Enlisted</u>
Between CONUS duty stations (Excludes PCS school)	\$484 ^R	\$1320
Between CONUS duty and PCS school	4065	837
From CONUS duty station to overseas duty station	7823	2639
From overseas duty station to CONUS duty station or to another overseas command	7824	2641
From overseas duty station to CONUS place of separation and then to home of record	4122	1414

- Losses Due to Separation, Retirement, and ETS (Includes separation travel and lump sum terminal leave pay)

Officer: \$5879 x Losses = Costs

Enlisted: \$1646 x Losses = Costs

(2) Recurring MPA Costs. Includes other pay and allowance costs which occur on a day-to-day basis. These recurring costs apply only to manyear changes. These costs include the pay raise effective 1 October 1980.

- New Accessions

Trainee - Includes the initial training period:

\$7205 x manyear = costs

Initial Year - Includes first year active duty pay and allowance:

Officer: \$16,980 x manyear = costs

Enlisted: 9,503 x manyear = costs

Second Year - Includes second year active duty pay and allowances:

Officer: \$16,980 x manyear = costs

Enlisted: 9,832 x manyear = costs

- World Wide Factor - (Represents an Army-wide average for costs of pay and allowances but excludes costs incident to deployment. This Army-wide factor will also apply for Reserve call-up):

Officer: \$31,974 x manyears = costs

Enlisted: 12,934 x manyears = costs

- Annual Rotation Rates. - These rotation rates can be applied to the one-time PCS costs to determine the annual rotation PCS costs for geographic areas. When computing the annual recurring PCS travel costs for personnel in overseas areas, the cost should include the return of one man to CONUS from overseas and the deployment of his replacement to the overseas area from CONUS:

	<u>Officer</u>	<u>Enlisted</u>
Korea	83%	96%
Europe	34%	55%
Pacific	34%	38%
Japan	40%	45%
Thailand	67%	93%
CONUS*	40%	48%
Alaska	39%	43%
Southern Command	37%	43%

* Excludes training moves.

- Annual Loss Rates. These annual rates can be applied to the number of personnel in a given TOE unit or force to determine the number of new accessions which will require basic training, AIT, et cetera, if the end strength is to remain constant. These rates do not represent total loss rates, nor do they represent total accession rates, since it is recognized that some enlistees (e.g., soldiers who immediately reenlist and soldiers who reenlist within 90 days of separation) will not require basic training and few will require advanced training. The actual rates have been modified to provide a factor which, when used in conjunction with blocks 58, 114, and 117 of Section III, will provide a reasonably reliable estimate of the annual recurring training costs required for a unit or force.

	<u>Officer</u>	<u>Enlisted</u>
Annual Loss Rate	10.5%	29.9%

(c) Changes to Army End Strength Deployed Overseas

- These are incremental costs and are over and above costs shown in paragraph (b)(2) Recurring MPA Costs above. Included are additional pay and allowance items such as COLA, housing allowance, temporary lodging (excludes PCS). (SOURCE: DCSPER)

Pacific

Officer: \$1,933 x Deployed MYs = Costs
 Enlisted: 984 x Deployed MYs = Costs

Korea

Officer: \$917 x Deployed MYs = Costs
Enlisted: 584 x Deployed MYs = Costs

Europe

Officer: \$807 x Deployed MYs = Costs
Enlisted: 324 x Deployed MYs = Costs

Alaska

Officer: \$2,639 x Deployed MYs = Costs
Enlisted: 2,065 x Deployed MYs = Costs

Southern Command

Officer: \$2,048 x Deployed MYs = Costs
Enlisted: 697 x Deployed MYs = Costs

b. Operation and Maintenance, Army (OMA) Appropriations

Provide for supplies, civilian personnel costs and contractual services in support of operating forces, training, maintenance, central supply activities, medical activities and Army-wide activities. Costs provided are based on the FY82 column of the President's FY83 Budget Submission and reflect FY82 budget dollars. A major problem in managing OMA is that of determining a proper balance between the three resources purchased with OMA funds: Civilian personnel, supplies and contractual services. Civilian personnel tend to be the most inflexible of the three resources. The current best estimate of variable civilian personnel cost is included in the overall OMA cost factors.

(1) One-time Costs

(a) Transportation and Handling of TOE Equipment from Depot Stocks.

This factor covers depot handling, to include packing and crating and overland transportation from depots to the unit's CONUS station.

$\$234.38 \times 1.8 \text{ Short Tons} \times \text{ES} = \text{Costs}$

(b) Packing and Crating for Unit Move. This factor covers both labor and material required to prepare supplies for shipment and applies Army-Wide. Use one-half of computation for reserve unit call-up. (SOURCE: DALO)

$\$23.16 \times \text{ES} = \text{Costs}$

(c) Transportation of TOE Equipment. This factor covers movement from the unit's CONUS station to the unit's overseas station. The factor includes CONUS line haul and port handling, sea or air transportation and overseas port handling and line haul. (SOURCE: DCSLOG)

1/
By Surface

Between CONUS Stations	\$ 140.66 x 1.8 STON x Ending Strength (ES) = Cost
Korea	620 x 1.8 STON x Deployed ES = Cost
Europe	689 x 1.8 STON x Deployed ES = Cost
Alaska	422 x 1.8 STON x Deployed ES = Cost
Thailand	604 x 1.8 STON x Deployed ES = Cost
Japan	607 x 1.8 STON x Deployed ES = Cost
Hawaii	548 x 1.8 STON x Deployed ES = Cost
Okinawa	625 x 1.8 STON x Deployed ES = Cost
Panama	495 x 1.8 STON x Deployed ES = Cost
Mid East	632 x 1.8 STON x Deployed ES = Cost

By Air 1/

Korea	\$ 5534 x 1.8 STON x Deployed ES = Cost
Europe	3523 x 1.8 STON x Deployed ES = Cost
Alaska	1411 x 1.8 STON x Deployed ES = Cost
Thailand	8333 x 1.8 STON x Deployed ES = Cost
Japan	4886 x 1.8 STON x Deployed ES = Cost
Hawaii	2210 x 1.8 STON x Deployed ES = Cost
Okinawa	5828 x 1.8 STON x Deployed ES = Cost
Panama	2017 x 1.8 STON x Deployed ES = Cost
Mid East	6441 x 1.8 STON x Deployed ES = Cost

(d) Inter-theater Transportation of TOE Equipment. These factors cover cost per short ton surface or air movement of unit equipment between overseas stations. See Table 1 and Table 2, Page II-10 for factors. (SOURCE: DCSLOG)

1/ Whenever type of division force is known, substitute the following short tons (STON) for the 1.8.

	<u>STON</u>
Infantry Division	1.55
Armored Division	3.17
Mechanized Division	2.85
Airborne Division	.82
Air Assault Division	.70

(e) Initial Pipeline and Handling Costs (includes Ammunition but Excludes POL). Initial deployment from CONUS to overseas areas requires the establishment of a large pipeline of resupply for support of personnel. This factor is used to determine the port handling and surface transportation cost of establishing a pipeline of resupply. (SOURCE: DCSLOG)

Korea	\$546 x Deployed ES = Cost
Europe	606 x Deployed ES = Cost
Japan	533 x Deployed ES = Cost
Hawaii	482 x Deployed ES = Cost
Alaska	372 x Deployed ES = Cost
Okinawa	550 x Deployed ES = Cost
Panama	435 x Deployed ES = Cost
Mid East	556 x Deployed ES = Cost

(f) Other OMA One-time Costs for Individuals Only. Covers one-time costs for OMA Programs 2, 8(O), and 8(M), as follows: (SOURCE: COA, DCSPER and TSG).

Increase in Accessions.

\$1,734 x Accession Increase = Cost (includes \$1,629 for organizational clothing and equipment in Program 2, \$89.10 Program 8(O), \$15.91 Program 8(M)).

Reduction in Accessions.

\$105 x Accession Reduction = Cost Avoidance (includes \$89.10 Program 8(O) and \$15.91 Program 8(M)).

(2) Recurring Costs. (SOURCE: COA)

(a) The following factor represents the total OMA Army-wide variable support cost and should only be used for a first approximation of cost for increases or decreases in Army military manyears.

\$6,527 x Military Manyears = Costs

(b) The following factor covers the total OMA variable support cost per military manyear within CONUS (excluding Program 1 strength). See page II-11 for details of these cost factors.

FORSCOM - (trained strength) - To be used in costing inter-theater manyear changes in CONUS General Purpose Forces.

\$5376 x Military Manyears = Costs

TABLE 1
INTER-THEATER SURFACE TRANSPORTATION OF TOE EQUIPMENT
COST PER SHORT TON (DOLLARS)

From/To	Europe	Korea	Alaska	Okinawa	Hawaii	Japan	Mid-East
Europe	-	\$178	-	\$174	\$168	\$180	\$134

(c) CONUS OMA Recurring Costs Used. The following factors are to be used for determining the total OMA variable cost for the indicated type of manpower changes within CONUS.

<u>OMA Program</u>	<u>CONUS*(FORSCOM)</u>	<u>TRADOC</u>
2 - General Purpose	\$1959	\$ 117
7S - Central Supply	670	685
7M - Depot Maintenance	219	219
8T - Training	160	1903
80 - Other Personnel Support	133	142
8M - Medical	403	403
9 - Administration	81	81
- Base Operation	<u>1751</u>	<u>1890</u>
TOTAL	\$5376	\$5440

*Based on force unit costs.

(d) OMA Recurring Cost Factors for Overseas Areas. The following factors are to be used to determine the total OMA variable cost for military manyear changes within the respective geographic areas.

<u>OMA Program 1/</u>	<u>Europe</u>	<u>Alaska</u>	<u>Pacific</u>	<u>Korea</u>	<u>South</u>
2 - General Purpose	\$4100	\$2517	\$1947	\$4476	\$1367
7S - Central Supply	701	694	774	717	767
7S - Transportation	1950	1312	2550	2551	1312
7M - Depot Maintenance	219	219	219	219	219
8T - Training	48	69	86	50	103
80 - Other Pers Spt	128	152	162	106	150
8M - Medical	452	403	403	457	403
9 - Administration	81	81	81	81	81
- Base Operation	<u>2353</u>	<u>2905</u>	<u>3329</u>	<u>4526</u>	<u>3767</u>
TOTAL	\$10032	\$8352	\$9551	\$13183	\$8169

c. Facilities Costs. (SOURCE: OCE)

(1) Provides for rehabilitation and construction of facilities for the Army under mobilization conditions. The costs cover construction of temporary facilities but exclude family housing, tentage and purchase of land. Assumption is made that most existing supporting facilities such as theaters and exchanges will be able to absorb the increase.

1/ Costs displayed by geographic area are not limited to funds allocated to the major Army commands in those areas. Support costs incurred by CONUS commands are included (e.g., DARCOM, TRADOC).

(2) These planning cost data apply to an increase in the active Army and represent a step-wise function of end strength increase. Small strength increases can be accommodated in existing active facilities at low per man cost. Larger increases, however, necessitate reconditioning facilities and so the cost per man rises. At the extreme, new facilities need to be built for large increases in end strength and/or inactive installations must be opened. At the time the scenario for a costing exercise is written, the type of construction needed must be specifically identified.

(3) Facilities Other Than by Construction.

(a) Expansion by Reduction in Space Allowance. The unit cost merely to reduce space allowance is zero, as it is assumed that no changes to real property are involved. Reduction from 72 square feet to 54 square feet per man would increase the number of spaces by 31 percent, and reduction from 90 square feet to 54 square feet would increase the number of spaces by 64 percent. However, this increase (based on the lower space allowance) should be used judiciously since it makes no allowance for diversion of barracks to administrative and supply functions or for maintenance of unit integrity.

Reactivate Inactive Facilities at Active Installations. The unit cost to reactivate inactive facilities at active installations is estimated at \$1688 per net usable space provided. This is based on an average of the six OMA costs in paragraph (c) below considered most representative. No MCA costs are included in this figure, since it is assumed no MCA would be required at an active installation. Costs are estimated to 1 October 1982 at an Engineering News Record (ENR) cost index of 2354. Costs should be adjusted to the DOD geographical cost index guide and to changes in the ENR cost index.

	<u>OMA</u>	<u>MCA</u>	<u>TOTAL</u>	<u>ESTIMATED TROOP CAPACITY</u>
Ft. Chaffee, AR	\$ 934	\$ 262	\$1196	20,000
Ft. Drum, NY	2110	1273	3383	20,000
Ft. Indiantown Gap, PA	1187	472	1655	23,000
Camp McCoy, WI	1100	434	1534	38,000
Camp Roberts, CA	1178	310	1488	31,000
Camp Pickett, VA	3616	807	4423	42,000

These unit costs for reactivating installations are predicated upon accomplishment of all work required to reactivate the entire installation, including such items as rehabilitation of utilities, systems, road networks, ammunition storage facilities, motor pools, and all other supporting facilities required. These costs are, therefore, not valid for partial reactivation. Reactivation of inactive installations without accomplishment of the MCA portion of the required work is not feasible. Costs are estimated to 1 October 1982 at an ENR cost index of 2354.

(4) Construction of Additional Facilities - CONUS.

(a) The following cost figures are for hypothetical examples using four various sized new installations and two expansion sizes to an existing installation. All examples are based on providing troop housing for 100 percent of the enlisted men at 54 square feet per man. Estimates are based on use of pre-engineered metal buildings. BOQ spaces were provided for 80 percent of the officer complement. Military strengths include only personnel of the prime mission of the installation and necessary support troops. Small airfield facilities are included only for the division or larger size installation. All costs reflect 1 October 1982 prices, using an ENR cost index of 2354. Cost should be adjusted to the DOD geographic cost index in the Military Cost Review Guide and to changes in the ENR cost index published in the Engineering News Record magazine.

(b) New Installations - CONUS.

ATC or School Installation - Military strength 10,000 -
Cost per man \$15,723.

A Two-Brigade Installation - Total military strength
11,517 including 675 support troops - Cost per
man \$17,867.

A one-division post made up of six infantry battalions,
two armored battalions, two mechanized battalions and
ROAD required airfield facilities. Total military
strength 16,557, including 825 support troops - Cost
per man \$15,723.

A 28,074 man-post made up of one division plus two brigades,
as listed above, combined into a single new installation
- Cost per man \$14,120.

(c) Expanded Installations - CONUS. Both of these examples are
additives to a one-division post. These cost figures should be used with
extreme caution as the cost per man can and will fluctuate greatly with a
change in either the size of the basic installation or the expanded portion.

A 10,000-man school or ATC added to a one-division post -
Total military strength 26,557 - Cost per man of the
expansion is \$10,752.

A two-brigade sized addition to an existing one-division post -
Total military strength 28,074 - Cost per man of the expansion
is \$14,120.

(5) Overseas Areas. Cost figures for CONUS installations should be used with appropriate price adjustments based on the following factors. The current FY82 factors are as follows (in balance of payment areas, these factors are applicable to normal construction procedures only):

Belgium	1.50
Germany	1.50
Italy	1.10
Korea	1.05

(6) Specific costs for specific installations can be furnished upon request by the Office, Chief of Engineers, in approximately one working day per installation plus mailing time.

(7) Where additional family housing units are to be introduced, use the following family housing management account factor for each housing unit added:

\$59,327 per housing unit (construction 1 April 1982).

\$1,895 for first year operation and maintenance per housing unit.

\$3,980 for average cost per year for each housing unit in the inventory.

SECTION III

FORCE COST INFORMATION SYSTEM

1. INTRODUCTION.

a. This section of the AFPCH is designed to be used as an aid in analyzing variations in resource requirements resulting from proposed force changes to active Army forces in a peacetime environment. Data shown are intended to be used to estimate first approximation of costs of changes in force structures, in deployment, and in rates of activity. They should provide consistent and reasonably accurate cost projections for use in force structure studies, requirements studies, and other special planning studies.

b. The data are intended to represent the variable effect on costs, within the Procurement, MPA, and OMA appropriations structure, of changes in numbers, types, and geographic location of units in the force structure, or of changes in number and types of personnel and equipment within units in the existing force.

c. Resource requirements (manpower and equipment), one-time costs and annual recurring costs in this section represent full TOE authorized level of organization (ALO) structuring. Data for ALO levels 2, 3, 4 and 5 are available in the Cost System Research and Data Base Division, Directorate of Cost Analysis, Comptroller of the Army, The Pentagon, Washington, DC 20310.

d. This section is subdivided into several parts for ease of reference and presentation.

(1) Paragraph 5 contains the output matrix description and methodology for developing the costs for TOE units that are contained in paragraphs 6 and 7. An investment cost page, operations cost page and descriptive data pages are provided for each unit. The cost data pages show cost by appropriation and by category within appropriation for the force unit. The descriptive data pages show TOE strength, major line items of procurement equipment and tonnage data for the TOE equipment.

(2) Paragraph 7 contains a summary of nonrecurring and annual recurring costs by SRC number for all units contained in the TOE master file as of 1 April 1981.

(3) Paragraph 8 contains a list of TOE major equipment by line item number, the procurement unit cost and other selected data for the units contained in paragraph 6.

2. ASSUMPTIONS AND LIMITATIONS.

a. Assumptions. The following assumptions were used in developing costs contained in this section:

(1) The force unit being costed is activated in CONUS with full TOE equipment and full TOE trained strength.

(2) The force unit is charged with the cost of all initial personnel procurement and training required to produce the full TOE trained strength in the unit, without regard to when accession and training actually occurred. For example, the TOE for a newly-activated unit may specify an E-6, qualified as a Radar Maintenance Supervisor-Inspector, MOS 26W40. Obviously, this grade and skill level cannot be achieved within the activation lead time of the unit. Unit spaces in the higher grades and skill levels are filled with trained personnel already in the Army. The accession and training costs charged to the unit for these people can be considered as costs of procuring and training replacements to maintain the status quo in the Army strength from which unit personnel are drawn.

(3) Initial travel charged to the unit includes accession travel for all unit personnel from civilian life to training centers or schools, PCS travel for all personnel from the CONUS activation location to an overseas location when the unit is deployed overseas. If the unit remains in CONUS, the activation location is considered to be the permanent location.

(4) Movement of equipment and supplies to the newly-activated unit are as follows:

(a) All equipment and supplies come from Army depots and are shipped with OMA Program 7(S) funds to the unit activation location in CONUS. Pipeline for units scheduled to be deployed overseas goes directly to a CONUS port which is considered the first destination. Financing of handling and moving of all pipeline equipment and supplies from a port are assumed by OMA Program 7(S).

(b) The permanent location of units scheduled to remain in CONUS is considered to be the activation location and no further initial OMA Program 7(S) costs are included for movement of equipment and supplies.

(c) Units scheduled to be deployed overseas have their full unit equipment and supplies shipped to the activation location in CONUS. Financing of movement of the unit equipment and supplies is assumed by OMA Program 7(S) and covers depot handling, shipping cost to the unit, shipment to the port, sea transportation, overseas port handling and line haul to the units location. Handling and surface transportation costs of establishing, or increasing a pipeline is also paid by OMA 7(S).

(d) Pipeline equipment and supplies go to Army depots in Europe and Korea and to units in other overseas areas.

(5) Annual operating costs include operation of the force unit at full TOE trained strength, with full TOE equipment in a peacetime environment.

(6) Annual operating costs for Central Supply Activities are computed based on the same assumptions as initial investment costs with the following exceptions:

(a) Whenever Army depot operations are included, costs for base operations, supply management, and logistics control are also included. These costs are not considered variable for a one-time increase in workload (e.g., unit activation), but the continued increased workload of resupplying new units does generate costs in these categories of supply activities.

(b) Equipment and supplies for overseas units are shipped directly from supply source to ports in CONUS, then to Army depots in Europe and Korea, and to units in other overseas areas.

(7) Annual recurring PCS travel charged to units in overseas areas includes travel of replacement personnel from CONUS to overseas areas and of replaced personnel from overseas to CONUS. Annual recurring PCS travel charged to the unit in CONUS includes travel in CONUS of replacement personnel only. PCS travel of the personnel being replaced in a unit in CONUS is included in the cost for replacement personnel of the unit to which they are transferred, either in CONUS or overseas.

(8) Total MPA for the unit includes MPA for unit personnel, replacement personnel while in training, and prorated share of instructor and post overhead personnel at training centers and schools. Prorated share of MPA for Program 2 base operations cannot be determined and is omitted.

(9) Attrition from the force unit to civilian life is at the same rate as attrition from the Army. The unit is charged, based on active Army attrition rates, with annual recurring costs (Procurement, OMA, and MPA) of procuring and training unit replacement personnel, and with MPA cost of separation pay and travel of unit personnel being discharged from the Army.

b. Limitations. The following limitations are applicable to the use of costs in this section:

(1) Costs are appropriate only for changes in total Army forces with strengths of between 600,000 and 1,000,000.

(2) Initial costs are not time-phased. OMA and MPA are not given for the period of unit build-up at the CONUS activation location, although gross estimates of these costs can be made by use of an estimated activation lead time and the annual operating costs.

(3) Annual operating costs based on rotation rates or on attrition rates are generally not valid for the first two years a unit is in the force structure.

(4) No limits are set on the number of units that can be activated or deactivated before costs considered as fixed (not included in handbook factors) become variable due to the magnitude of change.

(5) One-time costs of unit deactivation are not included in the handbook.

(6) No consideration is given to existing Army equipment assets. Initial costs of equipment include costs for each item in the unit TOE.

(7) Non-recurring investment costs in this handbook do not include the cost of missiles and ammunition since these items are not authorized by TOE. Handbook users who wish to include these costs must develop them using current logistics guidance applicable to the specific unit being costed and its geographic location.

(8) Resource requirements (manpower and equipment), one-time costs and annual recurring costs are shown at full TOE (Level 1) for the unit. Data for Levels 2, 3, 4, and 5 are available in the Cost System Research and Data Base Division, Directorate of Cost Analysis, Comptroller of the Army.

3. TERMS AND PROGRAM DEFINITIONS.

a. General Terms and Definitions.

DECREMENTAL COST - A cost decrease resulting from a course of action; e.g., the decreasing resource implications caused by reducing the force.

EQUIPMENT - MAJOR END ITEMS - A final combination of end products ready for its intended use; e.g., launchers, tanks, vehicles and mobile machine shops.

INCREMENTAL COST - The added cost of changes in the rate or quantity of production or of force and installation activity levels. This refers to changes such as: adding new equipment or personnel, changing distribution channels, or increasing consumption rates. Although incremental costs is sometimes interpreted to be the same as marginal costs, the latter has a much more limited meaning, referring to the cost of one added unit of output.

INDIRECT COST - An item of cost which is incurred for joint objective and therefore cannot be identified specifically with a single final objective, such as a product, service, program or project. An indirect cost is usually allocated to the several cost objectives.

MARGINAL COST - A cost of adding one (and only one) more complete unit; e.g., the cost of adding one more troop unit to a force.

MISSION COSTS - Those costs paid for by mission (as opposed to base operations) funds.

OPERATIONAL READINESS FLOAT - End items of mission essential, maintenance significant equipment authorized for stockage by maintenance support units or activities to replace unserviceable repairable equipment to meet operational commitments.

RECURRING COST - Expenses for personnel, materiel consumed in use, operating, overhead, support services and other items incurred on an annual or recurring basis.

REPAIR CYCLE FLOAT - An additional quantity of end items of mission essential maintenance significant equipment specified for stockage in the supply system to permit withdrawal of equipment from organizations for scheduled overhaul without detracting from the units' readiness conditions.

STANDARD PRICE - "A predetermined dollar figure, on a unit basis, that reflects all acquisition costs other than those financed by the RDT&E appropriation, to include first destination transportation. The standard price is reviewed at least annually and adjusted to reflect changes in programmed acquisition" (See AR 735-7). In the Supply Bulletin (SB) 700-20, the unit price reflects the current procurement production price as supported by current contracts, purchase orders, or invoices. In this handbook, prices whose source was SB 700-20 are marked with (*). These prices have been adjusted to FY82 dollars. All other prices represent FY82 procurement costs extracted from the POM Procurement Data Base. The weapon system unit cost definition most nearly describing these prices is "flyaway (rollaway) costs," which includes hardware costs, initial production facilities, and related G&A and profit.

STANDARD REQUIREMENT CODE - A basic set of alpha-numeric codes identifying the table of organization and equipment for the purpose of expressing each and every possible combination or variation thereof, which when associated with organizational data is the basis for personnel and supply computations. The code is designed to facilitate the processing of TOE data through automatic data processing means. (See Appendix D, AR 310-31 for composition of SRC's).

STATIC COSTS (also known as fixed costs) - Those elements of cost that do not vary with volume of production, or a change in force strength within specified limits. Within this handbook, they are those costs which are not responsive to changes in military strength within the relevant range of 600,000 to 1,000,000 men and which require separate management action to effect a change.

SUNK COST - A cost which is irrevocably committed to a project; such costs have no bearing on the results of comparative cost studies. Therefore, sunk costs should never be combined with remaining present or future costs to aid in decisions between future alternative courses of action.

SUPPORT COSTS - Those costs not directly incurred by the mission of the activity or unit.

TRANSPORTATION, FIRST DESTINATION - The movement of property from f.o.b. point of origin to the point at which the material is first received for use or storage for subsequent distribution in the military supply system.

TRANSPORTATION, SECOND DESTINATION - The subsequent movement of property from the point of storage at which originally received.

VARIABLE COSTS - Those costs that vary with volume of output, or a change in force strength within specified limits. Within this handbook, they are those costs which are responsible to changes in military strength within the relevant range of 600,000 to 1,000,000 men.

b. Programs Included in the Force Cost Information System (FCIS).

PROGRAM 2 - GENERAL PURPOSE FORCES - Consists of general purpose force-oriented program elements including the command organizations associated with these forces, the logistics organizations organic to these forces, and the related support units which are deployed or deployable as constituent parts of military forces and field organizations.

PROGRAM 7(S) - CENTRAL SUPPLY - Provides for supply depot operations, supply management operations, central procurement activities, base operations, command, second destination transportation, industrial preparedness operations, and logistics support activities.

PROGRAM 7(M) - DEPOT MAINTENANCE - Provides for depot level maintenance (to include installation of modification/conversion kits) of weapons/support systems and commodity group equipment. It also provides for maintenance support services, such as maintenance engineering and technical assistance maintenance publications and new equipment training.

PROGRAM 8(T) - TRAINING - Provides for the operation and maintenance of the Army school system and training activities to include training at civilian institutions, schools of other services and the preparation and distribution of training devices and publications.

PROGRAM 8(M) - MEDICAL ACTIVITIES - Provides for health service support of the Army and certain attendant activities such as health service administration, provision of health services in Army facilities, operation of medical service schools, training at "civilian" institutions, and other related health services activities.

PROGRAM 8(O) - OTHER PERSONNEL ACTIVITIES - Provides for recruiting activities, USA Recruiting Support Center, examining and entrance activities, operation of reception stations, welfare and morale services, operation of disciplinary barracks, and other personnel support services. Also provides for central procurement of special services supplies and equipment, TDY of bands, Chief of Chaplains specialized services, and Army Education Centers.

PROGRAM 9 - ADMINISTRATION AND ASSOCIATED ACTIVITIES - Provides for the support and operation of departmental and major administrative headquarters, field commands and administrative activities (not elsewhere accounted for). Includes HQDA and HQMDW.

4. SYSTEM DESCRIPTION.

a. Investment Cost.

(1) Direct Cost

(a) Procurement of Major Equipment

Non-recurring - The total cost of the initial allowances of equipment prescribed by the unit TOE and purchased with Procurement Appropriations (PEMA) funds. (See Items 11, 16, 22, and 28 of the Data Element Formula List, page III-21 and 22). There are two sources of unit prices used in obtaining these costs:

Army standard prices as defined in AR 735-7,
Army Pricing Policy and published in SB 700-20.
Items are denoted by (*) on equipment description
pages in paragraph 6. Prices have been adjusted
to FY82 dollars.

The POM Procurement Data Base where applicable.
These costs reflect prices trackable to the POM

Annual Recurring - Annual recurring procurement cost of replacing force unit major TOE equipment. Costs are derived by applying peacetime replacement factors for equipment line items to the cost of the TOE initial allowance for each line item. (See Items 41, 44, 48, and 52 of the Data Element Formula List, Pages III-23 and III-24.)

(b) PEMA Operational Readiness Float and Repair Cycle Float.

Non-recurring - The cost of additional PEMA procured TOE mission essential items authorized for stockage to replace unserviceable equipment to meet operational commitments. Costs are computed by multiplying the appropriate maintenance float factors by the cost of the TOE initial allowances for each item, as described above. (See items 12, 13, 17, 18, 23, 24, 29 and 30 of the Data Element Formula List, Pages III-21 and III-22.)

Annual Recurring - There is no annual recurring operational readiness or repair cycle float. Once these floats are set up, no recurring costs are incurred.

(c) PEMA Repair Parts and Secondary Items.

Non-recurring - The cost of the initial procurement of repair parts and other secondary items bought with PEMA funds but not included above. (See Items 14, 19, 25, and 31 on the Data Element Formula List, Pages III-21 and III-22.) SOURCE: ODCSLOG

Annual Recurring - Annual Procurement costs of PEMA repair parts and secondary items for units in the handbook are estimated by applying average factors to the cost of major TOE equipment initial allowances, PEMA operational readiness float, and PEMA repair cycle float, based on analysis of the PEMA appropriations. (See Items 42, 45, 49, and 53 of the Data Element Formula List, Pages III-23 and III-24.)

(d) Missile Procurement.

Non-recurring - These costs (Item 20 of the Data Element Formula List, Page III-22) are not included in the handbook since the authorized acquisition objective for missiles is based on force planning categories. The handbook user who wishes to include these costs must assign force planning codes to units and use current logistics guidance to derive costs.

Annual Recurring - Costs of missiles fired by the force unit during annual service practice. (See Item 46 of the Data Element Formula List, Page III-23.) SOURCE: CTA 23-100-6 for allowances.

(e) Procurement Ammunition.

Non-recurring - Cost of ammunition required for basic load or otherwise authorized for stockage in the unit is not included in item 26 of the Data Element Formula list since authorized basic loads vary according to the mission and location of each unit. Ammunition stocked for combat consumption depends on planned M-day deployments. Handbook users who wish to include these costs must develop them using current logistical guidance. Costs are included in item 26 for all TOE authorized items with an ABA code of K (See AR 710-1), which although not ammunition in the usual sense, are funded by the Procurement of Ammunition Appropriation.

Annual Recurring - Costs of ammunition (excludes missiles) fired by the force unit during annual service practice. (See Item 50 of the Data Element Formula List, Page III-23.) SOURCE: Quantities are based on the Depot Systems Command's product Weapon Ammunition Allowances by Weapon Number, Ammunition Item Numbers.

(2) Indirect Investment Cost (MOS Training)

(a) Procurement.

Non-recurring - Item 32 cost is the sum of items 33 thru 37 on the Data Element Formula List, Page III-23. Item 33, 34, 35 and 37 are currently assumed to be zero since a methodology for determining these procurement appropriation costs has not yet been devised. Training costs for item 36 (procurement of ammo) are contained in the Military Occupational Specialty Training Handbook. These costs are updated periodically for use in the FCIS to develop AFPC training costs. The costs developed by the formula in item 36 cover the weighted minimum average formal training required for the skill involved and include MOS/SSI, ASI and SQI Training costs, as applicable.

Annual Recurring - Item 54 is the sum of Items 55 thru 59 on the Data Element Formula List, Page III-24. Items 55, 56, 57 and 59 are currently figured to be zero. Item 58 is the sum of the officer and enlisted annual loss rate times the non-recurring MOS training ammunition cost for officers and enlisted personnel, respectively.

b. Operations Cost.

(1) Direct Cost.

(a) OMA PLL Repair Parts.

Non-recurring - The cost of the initial procurement of the prescribed load list (PLL) repair parts bought with OMA funds. PLL are those repair parts authorized by major commanders by authority of AR 735-35 to be on hand in units for organic maintenance of assigned equipment. The PLL is carried by the individual or on unit transportation and enables the unit to sustain itself during operations until resupply can be effected. (See Item 65 of the Data Element Formula List, Page III-24.) SOURCE: DCSLOG

Annual Recurring. - Not broken out separately. (Cost of Item 97 is contained in Item 101, Page III-27 of the Data Element Formula List.)

(b) OMA Minor Equipment (Program 2).

Non-recurring - The cost of initial allowances of TOE items procured with OMA funds either directly or from the Army Stock Fund. (See Item 66 of the Data Element Formula List, Page III-24). SOURCE: TOE Master File for quantities; SB 700-20 for prices.

Annual Recurring - Not broken out separately. (Cost of Item 98 is contained in Item 101, Page III-27 of the Data Element Formula List.)

(c) OMA Organizational Clothing and Equipment (Program 2).

Non-recurring - Station accession costs, including furniture and furnishings for quarters and the initial purchases from OMA funds for items authorized in the appropriate Table of Allowances. (See Item 67 of the Data Element Formula List, Page III-24.) SOURCE: FORSCOM/COA.

Annual Recurring - Not broken out separately. (Cost of Item 99 is contained in Item 101, Page III-27 of the Data Element Formula List.)

(d) OMA Unit Operations (except aircraft).

Non-recurring - Cost of unit operations during unit activation (Item 69 of the Data Element Formula List, Page III-24) are not included in this handbook (see limitation 2, Page III-4).

Annual Recurring - Annual mission costs of operating force units, excluding the operation of aircraft. Costs in the handbook are computed by applying the factors in Item 101 of the Data Element Formula List, Page III-27 to the total TOE strength and the total major TOE equipment initial costs (excluding aircraft).

(e) OMA Aircraft Operations.

Non-recurring - Costs of unit operations during unit activation (Item 70 of the Data Element Formula List) are not included in this handbook. (See Limitation 2, Page III-4).

Annual Recurring - Program 1 and 2 costs for annual operation of aircraft in force units. Cost are estimated based on the number and models of aircraft in the TOE, the annual flying hours, and costs per hour shown in Item 102 of the Data Element Formula List, Page III-27. SOURCE: TOE Master File for number of aircraft; AME Division, Directorate of Cost Analysis, OCA for cost per flying hour and flying hours per aircraft.

(f) MPA - PCS.

Non-recurring - Costs for the initial PCS travel of the TOE officer and enlisted strength. Initial PCS deployment costs for a force unit include travel from schools or training centers to the unit activation location in CONUS. Units deployed to overseas areas include, in addition, PCS costs of travel from the activation location in CONUS to the permanent location in an overseas area. (See Item 72, Page III-25.)

Annual Recurring - Permanent change of station (PCS) travel paid from the MPA appropriation. (PCS travel is computed using the factors for recurring PCS deployment and the rotation rates found in Item 105, Page III-28.) SOURCE: DCSPER. Annual recurring PCS travel costs are computed as follows:

Units in CONUS - The rotation rates in Item 105 of the Data Element Formula List are applied to the TOE officer and enlisted strengths and the results multiplied by the CONUS travel costs shown in Item 105 of the Data Element Formula List, Page III-28.

Units in Overseas Areas - The appropriate rotation rates in Item 105 of the Data Element Formula List, Page III-28, are applied to the TOE officer and enlisted strengths and the result multiplied by the sum of the recurring PCS travel costs from CONUS to the appropriate overseas area and the PCS travel cost from the appropriate overseas area to CONUS.

(g) MPA (excluding PCS) Other.

Non-recurring - Military pay and allowances of unit personnel (Item 73 of the Data Element Formula List, Page III-25) during activation of a unit are not included in the handbook (see Limitations, Page III-4).

Annual Recurring - The military personnel costs (MPA appropriations only) for the manpower of the force unit. Costs include base pay and allowances plus special pay for pilots, paratroopers and doctors where appropriate. (See Item 106 of the Data Element Formula List, Page III-28.)
SOURCE: DCSPER

(2) Indirect Operations Cost.

(a) OMA Program 2 - Base Operations.

Non-recurring - Base operations in support of the force unit during unit activation (Item 76 of the Data Element Formula List, Page III-25) are not included in the handbook (see limitation 2, Page III-4).

Annual Recurring - Annual OMA cost of installation operations in support of force units. Cost in the handbook are computed by applying the factors in Item 109 of the Data Element Formula List, Page III-31. SOURCE: CSR & DB Div, OCA.

(b) Central Supply Activities (OMA Program 7(S))

Non-recurring - Program 7(S) includes variable costs of procurement operations, processing, storing, issuing, and transporting initial equipment from CONUS depots to the using unit (second destination transportation). Also included are costs to fill supply pipeline levels. (Factors used to compute initial central supply activity costs are found in Item 78 of the Data Element Formula List, Page III-25.) SOURCE: DCSLOG, for cost per short ton, per capita cost factors, and supply levels; Force Planning Information System, for short tons per line item of equipment; and TOE Master File, for TOE strength and equipment allowances.

Annual Recurring - Program 7(S) includes costs related to force unit supplies consumed per manyear, including second destination transportation and the variable portion of procurement operations, supply depot operations, supply management operations and port operations. (Costs in the handbook are computed using the factors found in Item 111 of the Data Element Formula List, Page III-31. SOURCE: CSR and DB Division, OCA.

(c) OMA Program 7 (M).

Non-recurring - This element is zero. There are no non-recurring depot maintenance costs in setting up a unit. (See Item 79 of the Data Element Formula List, Page III-25.)

Annual Recurring - Depot Materiel (see Item 112 of the Data Element Formula List, Page III-31). SOURCE: DESCOM. Specific reports include:

Continuing Balance System (CBS Summary File
(U), Classified CONFIDENTIAL.

DESCOM RCS 1397 Report (Depot Maintenance Cost).

Weapon Support System Identification Code File (WSS File). The expenditure of cyclic normal overhaul of an end item, including overhaul of components separately from complete end item overhaul. The annual recurring OMA Program 7(M) expenditure for a force is the sum of the 7(M) factors for each LIN in the force. The 7(M) factors used in FY XX are determined from actual data for FY (XX-1) by dividing total LIN expenditures by total LIN assets

(d) OMA Program 8(M).

Non-recurring - Medical examination costs of accession of personnel. (See Item 80 of the Data Element Formula List, Page III-25). SOURCE: TSG.

Annual Recurring - The variable costs of medical services which can be related to military personnel of the force unit. (The factors found in Item 113 of the Data Element Formula List, Page III-31 are applied to total TOE strength to obtain costs.) SOURCE: CSR and DB Division, OCA.

(e) OMA Program 8(T).

Non-recurring - Training costs, showing course patterns, are contained in detail in the Military Occupational Speciality Training Cost Handbook (MOSB). These costs are updated periodically for use in the FCIS to develop AFPC training costs. The costs developed by the formula in Item 81 of the Data Element Formula List, Page III-25 cover the weighted minimum average formal training required for the skill involved and include MOS/SSI, ASI, and SQI training costs, as applicable. SOURCE: DCA/TRADOC; MOSB.

Annual Recurring - OMA costs of replacement MOS training of unit personnel. (See OMA Program 8(T) non-recurring and Item 114 of the Data Element Formula List, Page III-31.) SOURCE: DCA/TRADOC; MOSB.

(f) OMA Program 8(O).

Non-recurring - Personnel processing costs of accession of personnel. See Item 82 of Data Element Formula List, Page III-26.) SOURCE: DCSPER.

Annual Recurring. - The variable cost of personnel support type activities. Costs in Europe include operation of schools for dependents. (The factors in Item 115 of the Data Element Formula List, Page III-31, are applied to total TOE strength to compute the costs.) SOURCE: CSR and DB Division, OCA.

(g) OMA Program 9.

Non-recurring - Administrative costs of accession of personnel. (See Item 83 of the Data Element Formula List, Page III-26.) SOURCE: DCSPER.

Annual Recurring - Administrative and associated activities costs which vary with strength changes. (Costs in the handbook are computed by applying the factors found in Item 116 of the Data Element Formula List, Page III-32, to total TOE strength.)

(h) MPA (MOS Training).

Non-recurring - Pay, basic allowance for quarters (where applicable), subsistence, clothing, and FICA for trainee; pay and allowances plus applicable PCS travel for trainers; and post military overhead pro-rated to each trainee. These costs are contained in complete detail in the MOSB. These costs are updated periodically for use in the FCIS to develop AFPCH training costs. The costs developed by the formula in Item 84 of the Data Element Formula List, Page III-26, cover the weighted minimum average formal training required for the skill involved and include MOS/SSI, ASI, and SQI training costs, as applicable. SOURCE: DCA/TRADOC; MOSB.

Annual Recurring - The annual cost of procurement and training of replacements necessary to maintain the strength of a force unit at full TOE. In addition, this category of costs includes separation travel and payments for unit personnel attrition from the active Army. Costs are computed by applying attrition factors to costs computed for non-recurring accession and training, and adding separation costs. (Separation costs are computed by multiplying the TOE officer and enlisted strength by the per capita costs and the attrition factors shown in Item 117 of the Data Element Formula List, Page III-32.) SOURCE: DCSPER for attrition factors and MPA separation pay and travel.

c. Descriptive Data.

(1) Strength - TOE strength by grade by TOE levels. SOURCE: TOE Master File.

(2) Level 1 Short Tons and Measurement Tons - Tonnage of TOE Level 1 equipment. SOURCE: Computer Movement Planning and Status System (COMPASS) File for tonnage; TOE Master File for equipment allowances.

(3) 1 Month Wartime Consumption and 1 Month Mobilization Training. The initial investment costs shown on the cost data pages of the handbook include only authorized peacetime equipment. The total wartime and mobilization training consumption authorized buy depends on logistic guidance and, if required in costing exercises, can be computed using the costs on the descriptive data pages and appropriate logistics guidance. Wartime and mobilization training replacement factors are applied to costs of initial allowances of line items of equipment to obtain costs. SOURCE: TOE Master File for initial allowances; DESCOM Report B057, Line Item Number Cross Reference to Standard Study Number for replacement factors.

(4) Major Procurement Equipment - A listing by line item number for each procurement appropriation, of line items of TOE equipment whose extended value equals or exceeds 0.5 percent of the total TOE initial allowance appropriation cost of the unit. The list includes, for each item shown, the line item number (LIN) and the extended value. The extended value equals the price per item multiplied by the quantity of the item in the TOE. SOURCE: TOE Master File for quantities; SB 700-20, and COA adjusted costs (trackable to POM costs) for prices.

d. Missile and Major Ammunition Investment Costs.

(1) This paragraph provides guidance to the analyst and requires the procurement cost of missiles as an add-on to the investment costs detailed in the type unit cost sections of this handbook.

(2) The FCIS is designed to cost TOE or MTOE force units in accordance with the equipment descriptions of these units found in the Army Master File. Since missiles are expendable items of inventory and the on-hand quantities vary depending on their utilization and resupply, and according to unit mission, geographic location and unit combat scenario, authorized missiles and ammunition are excluded from TOE/MTOE descriptions. Since these costs are excluded from all units, only the most minimal effect would occur in any incremental cost comparison and order of magnitude costs would not be affected. Uniform allowance rates for use in calculating ammunition/missile direct investment costs cannot be provided and handbook users who wish to include these costs must develop them using current logistic guidance applicable to the specific unit being costed at its specific geographic location.

5. OUTPUT MATRIX DESCRIPTION AND METHODOLOGY.

The following four pages are sample formats of the Investment Cost Page, Operating Cost Page, and Descriptive Data Pages which portray the peacetime variable costs associated with the force units costed by the FCIS. The parenthetical numbers by each item on the pages are keyed to the Data Element Formula List, Page III-21, which gives the factors and formulae used to cost each force unit.

DATA ELEMENT FORMULA LIST

- (1) Standard Requirement Code (SRC).
- (2) Ammunition Code - Ammo Code 1 = Combat/Combat Support Units, 2 = All other TOE units. (Printout suppressed)
- (3) Not used in handbook.
- (4) Unit nomenclature.
- (5) Date data bank was generated; factors and estimates current as of this date.

in Table 2).

- (182) Unit military strength data at TOE levels 1 through 3, B
- (183) and cadre.
- (184)
- (185)
- (186) (LIN quantity x LIN wartime ammunition consumption rate by
- (187) areas.) When rates are identified by area name rather than
- (188) code, information becomes CONFIDENTIAL. For identification
- by area name, see SB38-26
- (189) World-wide mobilization training ammunition rate computed
- as $1/12 \times (50)$.
- (190) $(142) + (151) + (160) + (169)$.
- (191) Date of TOE Master File used in compiling cost data bank.

6. REPRESENTATIVE UNITS.

a. This section contains detailed data for the division increment units contained in the five DFEs in Section IV. Costs are the peacetime "variable" costs associated with varying the number and types of units in force structures of between 600,000 and 1,000,000 men. Costs are in thousands of dollars. Specific cost elements are described in paragraph 4. A sample format keyed to a Data Element Formula List, which gives factors and formulae used to cost each force unit, is also contained in paragraph 5.

b. Non-recurring costs of initially equipping a force unit exclude all post D-Day consumption buys of equipment, ammunition and missiles authorized for a newly activated unit. Also, the non-recurring direct investment costs do not include the cost of missiles and major ammo. These items are not authorized by a TOE, but authorizations vary according to unit mission, geographic location and combat scenario of each unit. Therefore, a fixed allowance for type TOE is not practical.

c. Detailed cost and equipment data sheets in this section are assembled in SRC sequence. The SRC numbering system is explained and described in paragraphs 2-40 and Appendix D of AR 310-31. For convenience to users of this handbook, the most commonly used base number of the SRC, which identifies the branch of major subdivision of a TOE, is indicated below.

<u>SRC</u>	<u>TITLE</u>
<u>Positions 1 and 2</u>	
01	Aviation
03	Chemical
05	Engineers
06	Field Artillery
07	Infantry
08	Medical
09	Ordnance
10	Quartermaster
11	Signal
12	Adjutant General
14	Finance
16	Chaplain
17	Armor
19	Military Police
20	General
27	Military Law
29	Composite Units & Activities
30	Military Intelligence
31	Special Forces
32	Security
33	Psychological Operations
34	CEWI
37	Mechanized Infantry
39	Special Weapons
41	Civil Affairs
42	Supply
43	Maintenance (except Msl)
44	Air Defense Artillery
45	Censorship/Public Information
51	Army
52	Corps
54	Logistical Organizations and Operations
55	Transportation
57	Airborne
63	Combat Service Support
67	Air Assault
77	Light Infantry Division/Brigade
87	Heavy Division/Brigade
97	Division Training

d. Force cost data for units not contained in this section can be obtained by calling Autovon 225-6697.

7. TOE SUMMARY PEACETIME COSTS.

a. This section contains a table of summarized costs for each force unit in the FCIS data bank. Specific cost elements included are as follows:

(1) Non-recurring costs include initial procurement and deployment of equipment, supplies and repair parts for the force unit as specified in tables of organization and equipment (TOE), tables of allowances (TA), common tables of allowances (CTA) and field manuals (FMs); and initial procurement, MOS training and deployment of the military personnel in the unit. These costs exclude all Post D-Day consumption buys of equipment, ammunition, and missiles authorized for a newly activated unit. Authorizations are dependent on the force planning assignment of a unit rather than the unit TOE. The handbook user who is required to include these costs in his estimate must assign a force planning code to each unit being activated and determine Post D-Day Consumption Authorizations from current logistic guidance.

(2) Annual recurring costs include peacetime replacement of equipment and repair parts and other secondary items, training ammunition and missiles, unit operation and maintenance, military personnel pay and allowances, recruit and school training of replacements, personnel processing of replacements, separation pay and separation travel.

(3) The costs shown here are the peacetime variable costs associated with changes in force structures which vary between 600,000 and 1,000,000 men.

b. Detail data on representative units are presented in the preceding paragraph of this section. The detail on the rest of the units and data for authorization levels 2 and 3 are available from Cost System Research and Data Base Division, Directorate of Cost Analysis, Office of the Comptroller

8. MAJOR EQUIPMENT UNIT COSTS AND SELECTED CHARACTERISTICS.

a. Table 2 includes all procurement line items which appear on the Descriptive Data pages of paragraph 6. Items are listed by line item number (LIN) within procurement account:
of the Army.

- (1) Aircraft Procurement
- (2) Missile Procurement
- (3) Procurement of Weapons and Tracked Combat Vehicles
- (4) Other Procurement

b. Data included in this table are:

- (1) Procurement Cost 1/
- (2) OMA (7M) Annual Cost
- (3) Maintenance Float Factors
- (4) Consumption (replacement factors)
- (5) Unit Equipment Weight

1/ Prices marked with (*) are standard prices as defined in AR 735-7 and contained in SB 700-20. Prices have been adjusted to FY82 dollars. All other prices represent FY82 procurement costs extracted from the POM Procurement Data Base. Many of these prices differ widely from SB 700-20 prices but more accurately reflect the cost of equipping a unit when new equipment must be purchased today. The weapon system cost definition that most nearly describes these prices is "Flyaway (Rollaway) Costs" which includes hardware costs, initial production facilities, and related G&A and profit.

SECTION IV

FORCE STRUCTURING - DIVISION FORCE EQUIVALENT

1. INTRODUCTION.

a. The DFE concept is an accepted management tool used by the force planner to control the non-divisional combat and support structure requirements to sustain a division in combat. The cornerstone in the development of the DFE is the division. The Division Force Equivalent (DFE) is the average number of troops required to man a typical Army division and its supporting units in sustained combat.

b. This section contains non-recurring and annual recurring costs for "notional type" infantry, mechanized infantry, armored, airborne and air assault DFE's. The composition of these notional type DFE's was developed by the Deputy Chief of Staff for Operations and Plans (DCSOPS) as representative of a typical specimen DFE (scenario unspecified) and when costed by the Force Cost Information System (FCIS) provides gross order-of-magnitude costs for force planning purposes. The DFE costs DO NOT represent the structure, or cost, of any actual division in the Army force structure. However, by using the FCIS, these DFE's can be modified by the cost analysts to approximate any real DFE. Also, any real or imaginary DFE can be constructed using the TOE units in the FCIS data bank.

c. The composition of five different DFE's, costs of the Division Increment (DI), the non-Divisional Combat Increment (NDCI), the Tactical Support Increment (TSI), and DFE Summary Peacetime Costs are contained in the following paragraphs. Costs of the individual units of the DI are in Section III, Force Cost Information System. Cost and descriptive data sheets of other units can be obtained by contacting HQDA (DACA-CAC), Washington, DC 20310.

d. Since costs contained in this section are a product of the FCIS, the assumptions, methodology and caveats contained in Section III are applicable to all costs and data sheets in this section.

2. DIVISION FORCE EQUIVALENT (DFE) CONCEPT.

a. The DFE is a force sizing concept that notionally portrays a typical division with the deployable non-divisional combat and tactical support forces needed to sustain the division in combat. The need to

accurately depict the divisional and non-divisional forces resulted in the establishment of three categories which are defined as follows: a. The Division Increment (DI) consists of units which are organic to the division organization.

(1) The Non-Divisional Combat Increment (NDCI) consists of non-divisional combat units employed in support of the division and normally operating in the division or corps area of operations. It includes separate brigades, armored cavalry regiments, and non-divisional field artillery, air defense artillery, combat aviation, and combat engineers. It does not include combat units associated with Special Theater Forces, e.g., Theater Defense Brigades, Special Forces, and theater air defense systems.

(2) The Tactical Support Increment (TSI) consists of non-divisional units employed in support of the DI and NDCI. It does not include support units associated with Special Theater Forces, e.g., Defense Communications Agency, support to other services, and General Support Forces such as MTMC, DARCOM, TRADOC, etc. The structure planning factor associated with a typical DFE is 48,000 spaces, a portion of which for planning purposes is apportioned to each increment in the DFE (DI = 16k, NDCI = 12k, TSI = 20k).

b. The existence of units in the non-divisional combat increment and the tactical support increment depends on various criteria of which workload requirement satisfaction is foremost. The number, size and type of units supporting a division will constantly vary as the requirements of the division being supported and the units supporting the division also change. Unit capabilities are developed during the TOE development process, and serve as the rule of allocation. These rules, approved Army doctrine, are quantified for use in war gaming and force roundout simulations. The product of these simulations is a time phased deployed force which, after additional analysis based on military judgement, can be displayed as DFEs. Army Regulation 71-11, dated 11 May 1980, establishes the methodology for this force development process also known as Total Army Analysis (TAA). The notional DFE's represented in this chapter reflect the force structure that might exist in a mature theater at a particular point in time.

3. LIMITATIONS AND METHODOLOGY.

a. The DFE is not a type organization but rather a concept that nationally organizes types of units in a systematic manner. As such there is no list of actual units which make up, for instance, the DFE of the 2nd Armor Div. There are several reasons for this.

(1) Some support units are not necessarily designed to support one division. They are frequently designed to perform a certain amount of work. Depending on the theater and level of combat encountered, a unit may be capable of supporting several divisions or only a part of one division.

(2) Other units are purposely designed to support several divisions. For instance, a Corps headquarters commands several divisions and cannot really be said to be in the DFE of any particular one.

(3) The nature of the theater of operations where a division is to be employed may dictate the need for special units, e.g., water units in arid regions.

b. The division increment costs in this section are not identical to the division TOE costs contained in Section III. There are two reasons for this difference. The division costs in Section III are based on the total division TOE, whereas in Section IV costs are computed for each separate unit specified for the division increment costs. The cost of ammunition for operational readiness training is greater for Category I units than for Category II and III units. The division TOE is costed as a Category I unit. Units costed individually are costed as Category I, II and III, as appropriate, which results in a slightly different cost. The second reason for cost differences concerns the composition of the division increments which differ from the composition of the division TOE's. The composition of the DFEs are contained in paragraph 4.

c. DFE costs in this section represent the cost at Authorized Level of Organization (ALO) 1 as developed by using the Army Force Cost Information System. Costs at other ALOs, or of varying ALOs, can be developed through the FCIS if needed. Although each real division force will differ from these notional division forces in strength and organizational makeup, the notional DFEs provide a reliable base for order-of-magnitude costing - a base force that can be increased or decreased, units added or taken away and the cost impact readily discerned.

SECTION V

UNITS OF THE RESERVE COMPONENTS

This section will be provided under separate cover at a later date.

SECTION VI

WEAPON SYSTEM GENERAL COST FACTORS

1. INTRODUCTION.

a. The Operating and Support Cost Guide for Army Materiel Systems was developed and published by the Director of Cost Analysis, Officer, of The Comptroller of the Army, as DA Pamphlet No. 11-4, April 1976. It was published to achieve consistent preparation and documentation, by Army Cost Analysis offices, when preparing Weapon System Independent Parametric Cost Estimates, in developing cost inputs for cost and operational effectiveness analyses and in developing operating and support phase cost estimates.

b. The Operating and Support Cost Guide provides a framework for developing and presenting operating and support cost estimates and also contains cost estimating relationships (CER's) and equations for use in developing these estimates. It refers users to the AFPCH for many of the cost factors needed in these equations. Because these factors are to be found throughout the various sections of the AFPCH, which was originally designed exclusively for force costing, this section has been developed for the sole purpose of providing a quick reference source for operating and support cost factors.

2. REQUIREMENTS AND COST FACTORS.

a. Appendix C, Pamphlet 11-4 contains an example of an operating and support cost estimate. Tables C-2 and C-3 summarize the various cost factors used in the example and list the AFPCH as the source of these factors which are shown below. The replacement factor (RF), or correlation factor (CF), number pertains to the factor number identifying the factor description in Appendix C.

<u>Factor No.</u>	<u>Factor Description</u>	<u>Factor</u>
RF 14	Annual attrition rate for officers	10.5%
RF 15	Annual attrition rate for warrant officers	10.5%
RF 16	Annual attrition rate for enlisted personnel	29.9%
RF 18	Annual rotation rate for overseas theaters, officers.....	
	Pacific	34.0%
	Europe	34.0%
	CONUS	40.0%
	Alaska	39.0%
	Korea	83.0%
RF 19	Annual rotation rate for overseas theaters warrant officers	
	Same as RF 18	

<u>Factor No.</u>	<u>Factor Description</u>	<u>Factor</u>

3. RELATIONSHIP OF WEAPON SYSTEM OPERATING AND SUPPORT COST TO FORCE COSTING.

a. DA Pamphlet 11-4 on Operating and Support Costing for Army Materiel Systems was developed to provide a standardized methodology and data sources for developing operating and support costs for weapon systems. The Force Cost Information System (FCIS) provides the standardization methodology for force costing, including operating and support costs for force units. Since the purposes of these costing exercises are different, the methodologies are naturally different and the operating cost of a particular weapon system cannot readily be identified in the operating cost developed by the FCIS for a force unit containing that weapon system. There is also a distinct difference between the O&S Cost Guide and the FCIS/AFPCH in the use of terms "direct" and "indirect". In the O&S Cost Guide, the terms are applied in relation to the weapon/support system being costed. In the FCIS/AFPCH, the terms are applied in relation to the unit being costed.

b. Figure 1 shows where the cost elements described by the O&S Cost Guide headings may be found in the cost displays used by the FCIS and the AFPCH. Because the O&S Cost Guide is weapon/support system oriented, whereas the FCIS/AFPCH is unit oriented, there is not a complete match in many cases. Therefore, it is imperative that the footnotes designated by numbers in the various columns be read carefully. The numbered footnotes are keyed to the O&S Cost Guide, but are entered on the horizontal position designated by the FCIS/AFPCH headings. (Fig. 1 is found on page VI-5.)

c. Questions pertaining to weapon system costing should be directed to the responsible analyst within the Cost Analysis Directorate. Questions pertaining to aircraft, missiles and electronics will be answered by calling AUTOVON 225-0265 or 227-5274. Questions on weapons, tracked combat vehicles and ammunition will be answered by calling AUTOVON 225-7950 or 227-0965.

4/ Administration and leave associated with training which was previously included in these costs are now included in MPA costs in the 1981 MOSB.

Figure 1

FOOTNOTE EXPLANATIONS.

1/ The O&S Cost Guide shows base pay and allowance and flight pay discretely for crew and maintenance personnel. In doing so, it includes some maintenance personnel that are not in the same unit employing the weapon/support system being costed, but in a support unit. The FCIS/AFPCH shows as military pay all the pay elements, including base pay and allowance, and flight pay for all personnel who are organic to the specific unit being costed, thus excluding non-unit maintenance personnel associated with a given materiel system.

2/ The O&S Cost Guide shows theater cost for that fraction of military personnel expected to be deployed overseas. The FCIS/AFPCH shows costs discretely for a geographical area. In so doing, it uses the same appropriate theater cost as used in the O&S Cost Guide, but assesses it against the TOE strength of the unit being costed. Thus, for example, for a unit in Europe, everyone in the unit is added for computation of the theater cost.

3/ The O&S Cost Guide uses the flight pay multiplier as a factor applied to crew personnel and maintenance personnel P&A. The FCIS/AFPCH does not use the flight pay multiplier. In costing the TOE personnel list, all personnel drawing flight pay are included since the TOE includes flight personnel over and above the set requirement for crew and maintenance.

4/ Maintenance personnel, as listed in the O&S Cost Guide, are those associated with the material system, and include personnel external to the unit being costed. The FCIS/AFPCH includes maintenance personnel in the unit being costed but does not include such personnel in support units

5/ In the O&S Cost Guide this cost element is summed for all geographical areas. In the FCIS/AFPCH, this cost element is shown as it is pertinent to each unit and varies for the geographical areas for which costs are displayed.

6/ In the O&S Cost Guide, this cost element is shown as one figure, but pertains only to the weapon/support system being costed. In the FCIS/AFPCH, separate cost elements contain portions which are consolidated into one element in the O&S Cost Guide. It would be difficult to separate the replenishment spares costs from some of the elements displayed, especially in the case of those headed Direct OMA "Unit Operations," "Aircraft Operations," and Indirect OMA "BASEOPS)". In the FCIS/AFPCH, the cost displays include costs of replenishment spares for all items of equipment in the TOE.

7/ In the O&S Cost Guide, this cost element pertains only to the weapon/support system being costed. In the FCIS/AFPCH, the cost element is included within other costs, and also pertains to all items in the TOE.

8/ In the O&S Cost Guide, this cost element pertains only to the weapon/support system being costed. In the FCIS/AFPCH, the displayed costs pertain to all appropriate items in the TOE.

9/ The O&S Cost Guide shows this cost element as one figure for the weapon/support system being costed. In the FCIS/AFPCH, this cost element, if present, is incorporated into several cost elements. Modifications may be performed at organization, DS or GS but usually are performed at depot level.

10/ In the O&S Cost Guide, this element is shown as one figure and pertains only to the weapon/support being costed. In the FCIS/AFPCH, the cost element is incorporated into one figure that contains other costs, all of which are unit oriented and not system oriented.

11/ In the O&S Cost Guide, this is shown as a separate element, but pertains only to MPA. In the FCIS/AFPCH this element is not shown as a discrete element but is submerged in cost displays. For example, MPA, in the FCIS/AFPCH, is computed using the average pay and allowances by grade as shown in the TOE; that average actually includes the TPP increment of the Army strength. Similarly, such elements as Program 8(0) and Program 9 are based on the preparation of any strength which includes the TPP.

12/ In the O&S Cost Guide this element includes only quarters maintenance and utilities, but pertains only to the weapon/support system and attendant personnel being costed. In the FCIS/AFPCH, this element is only an unidentifiable portion of the base operations cost element and furthermore pertains to all personnel of the unit being costed.

13/ In the O&S Cost Guide this element includes medical support for all military personnel associated with the weapon system as mentioned in Footnotes 1/ and 4/. In the FCIS/AFPCH, this element pertains only to the personnel organic to the unit being costed.

14/ This element in the O&S Cost Guide may be in "Direct Other" or "Indirect Other" and is not possible to state where its counterpart might appear in an FCIS/AFPCH display.

15/ In the O&S Cost Guide, the cost of major items provided for attrition is usually included in the investment phase where the item is procured. In the FCIS/AFPCH, this is computed by applying replacement factors to item procurement costs.

16/ In the O&S Cost Guide, transportation of the material system to and from depot maintenance is estimated. In the FCIS/AFPCH, per capita factors for force unit supplies consumed per year are used to estimate 7(S) cost for the entire force unit being costed.
